

Course title:	Economic Ethics and Philosophy: Can the market be moral?
Instructor:	Dr. Wolfram Bergande
Email address:	w.bergande@fu-berlin.de
Language of instruction:	English
Contact hours:	48 (6 per day)
ECTS credits:	5
Prerequisites:	Students should be able to speak and read English at the upper intermediate level (B2) or higher.

Course description

Modern capitalist market economy is an extremely powerful instrument to create wealth and to satisfy human demands – and to exploit, alienate and destroy the very societies it is supposed to serve. How can it be made moral?

Actually, there are quite a number of ways: for example, through deliberate lawmaking, responsible research & development (e.g. technology assessment), through enlightened consumer choices and sustainable use of human and natural capital assets. But they often come at a high cost and involve more fundamental questions:

- How can politicians and lawmakers regulate the market for the common good without suffocating it?
- How can big corporations and tech companies continue to deliver innovative services without monopolizing the market and dominating their customers?
- What does a fair distribution of income look like?
- How do we assign value to natural and social goods (like clean air or low crime rates) and how do we measure sustainable welfare beyond traditional economic growth?
- How can consumers harness their own power to make informed choices and act in accordance with their values?
- Are digital business models based on artificial intelligence and machine learning threatening the autonomy of consumer choice?
- What does corporate social responsibility look like in times of crisis?

These and other questions are not only of interest to economists and business people but are relevant to all economic agents (individuals, companies, state institutions, etc.).

To answer these questions, the course equips participants with key ethical approaches to economic behavior (virtue ethics, religious teachings, deontology, utilitarianism, master morality, neo-liberalism), approaches which have been or still are dominating ethical discourses on economic behavior.

These ethical approaches and ideas range from Ancient Greek philosophy to modern economic theory (Friedman, Ostrom, and Game Theory). Since religions, philosophies and social theories are major sources of ethical conduct, the course covers a wide array of these, including teachings of the Catholic Church fathers, ideas from European modern period philosophy (Kant, Mill, Marx, Nietzsche), from modern critical sociology (Weber, Adorno, Marcuse) and neo-liberalism (von Mises, von Hayek).

As a major learning outcome, participants develop ethical frames of reference which allow them to identify and tackle ethical dilemmas posed by today's economy. Particularly, they will learn to adopt strategies that avoid moral hazards and self-harming or self-defeating behavior. Thus, they will be able to act ethically conscious in real life situations, be it...

- as decision-makers in firms and investment companies allocating capital, workforce and bonuses,
- as scientific researchers launching technologies that impact human life and the environment,
- as customers rewarding sustainable or punishing unsustainable business models, production methods or supply chains or
- as lawmakers or leaders of NGOs setting legal and ethical standards and fighting collusion, corruption, fraud, exploitation, overproduction & -consumption, wastefulness, obsolescence, extinction, free-riding or other forms of cost externalizing.

Participants' learning outcomes will be put to test in a hands-on way:

- when we discuss contemporary topics in business or economic ethics,
- when we conduct online expert interviews on e.g. corporate compliance, digital business models or the ethics of artificial intelligence and
- when we play (and have fun with) a CSR (corporate social responsibility) online simulation game.

Below the line, participants will learn to analyze, interpret and transform economic behavior – first and foremost their own!

Student profile

First year of bachelor's degree or higher (preferably but not necessarily in a humanities or social sciences discipline or in law or economic studies).

Course requirements

1. Regular attendance and active participation in class.
2. Group presentation in class (about 30 minutes) on a text or a topic from the syllabus.
3. Writing an essay (about 2,000 words) on a text or a topic from the syllabus or on a self-chosen topic coordinated with the course instructor and related to economic ethics (due date: Monday, January 29, 2024, 23:59h; please send your essay as a PDF file to: w.bergande@fu-berlin.de).

Required language skills

The language of instruction is English. Language proficiency on an advanced intermediate level (B2) is a prerequisite for participation. For orientation purposes, you can assess your

language skills here (Common European Framework of Reference for Languages (CEFR): <https://rm.coe.int/CoERMPublicCommonSearchServices/DisplayDCTMContent?documentId=090000168045bb52>)

Grading

Fully understanding the complexity of the course topics relies on interactive discussion and debate. Readings of the texts provided are the basis for lectures and discussions and should be completed prior to each session. You should attend class prepared to summarize main points and apply the readings to in-class analysis. In addition, you should be willing to brainstorm based on your own ideas and prior experience to add value to the class discussion. The focus of your grade will be your delivery of the presentation in class and the essay you write.

Participation in discussions, debates,
 during expert interviews or in the simulation game 25%
 Presentation in class on a topic from the syllabus 30%
 Research essay 45%

Readings

A comprehensive reading list with all mandatory texts (in PDF format) will be provided online.

Course schedule
